

# August Release Highlights and Reminders

## Checklists

Pilot users only!! Do not use the new Checklist button on the ADMIN screen unless you are involved in the Checklist Pilot.

## Supplements

When creating a supplement on a grant, if the selected grant is not the parent grant, the system will look for the parent grant for which the supplement is to be created. Users will no longer have the capability to incorrectly create supplements on supplement awards. Users will no longer have capability to create a supplement on terminated and withdrawn grants.

## Type 9 document numbers

The document number for Type 9 grants now have a new format where the last character will always be 'A.' The document number business rule has been modified, which changes the validation of a Type 9 grant to check for this new format.

## Early Termination

In the March release of GM version 1.10.2.0, functionality was added to delete all future year Type 5 grants and to inactive any future Type 2 grants. This functionality has been enhanced to handle the processing of any subprojects or supplements that exist for either the current terminated grant or its future year grants.

## NGA Changes

The first page of the NGA has been modified to exclude the inventions paragraph for Fellowships and Training grants. The NGA will now also display both the Project and Budget Start and End Dates for Fellowship grants after activation.

## Edit Check Screen

Several error messages displayed in the Edit Check Result Message field on the Edit Checks screen have been modified based on the working group's recommendations.

## Subproject Module Link

A modification has been made to the GM System to provide a link to the Subprojects module.

## Retirement of Line 5 in addresses

Existing data for some addresses have been converted, and the content of Line 5 has been moved into the city, state, and zip code fields. However, person records that continue to display Line 5 address are cases where a conversion was not possible and the *display-only* text is there for reference only or informational purposes. To make changes to an address containing Line 5 information:

1. Copy the information to the city, state, or Zip code fields.
2. Click the **Erase** button to remove the contents of Line 5 before saving all changes.
